

Edge Sentinel - Unified Timetable

6 months · every hour aligned · no wasted minutes

Period	23 Jun 2026 - 31 Dec 2026 (~27 weeks)
Stack	Edge Sentinel + 4 sibling repos · CAT 2026 · DSSSB ASO · IBPS PO · JLPT N4
Weekly hours	~32.5 (CAT 12 / DSSSB+IBPS 6 / Japanese 2 / Projects 10 / Mock analysis 1.5 / GK 1)
Daily rules (non-negotiable)	1 CAT problem set · 15 Anki cards · 1 GitHub commit · no social media before 07:30
Print	A4 landscape preferred; keep on desk

Priority stack (everything else drops before these)

Tier	What	Daily time	Why
1	CAT quant + verbal + DILR	2 hr/day	MS applications / IIM-I/T/R/K/V + MDI + IIFT
1	Edge Sentinel real-data bench	4 hr Sat + Sun	Paper + research profile; this is the differentiator
1	Daily GitHub commit (any repo)	30 sec	Streak + recruiter signal
2	Japanese Anki + Genki	30 min	JLPT N4 December exam
2	DSSSB ASO + IBPS PO	30 min weekday	Syllabus overlap with CAT; cheap insurance
2	Edge Sentinel paper writing	1 hr Sun	IEEE Access submission target
3	Sibling repo MVP work	1 hr/week	Keeps contribution graph lit across 5 repos
3	GK / current affairs	30 min	DSSSB + IBPS sectional
DROP	Anything new. No new projects, no new tools, no new tracks.		Every switch weakens the profile

Daily template (every day, all 7 days a week)

Time	Activity	Stack
06:30 - 07:00	CAT quant: 1 video + 10 problems (2IIM / Rodha)	CAT
07:00 - 07:30	Japanese N4: 15 Anki cards + 1 Genki section	JLPT
09:00 - 18:00	Work / college / non-project commitments (varies)	—
19:00 - 20:30	Exam prep rotation: VARC / Quant / Reasoning / DILR (Mon-Fri)	CAT + DSSSB + IBPS
22:00 - 22:01	End-of-day GitHub commit (run the snippet)	Edge Sentinel
Sat 09:00 - 13:00	Sibling repo build (rotating)	Repos
Sat 14:00 - 18:00	Edge Sentinel deep work: firmware / ML / paper	Edge Sentinel
Sun 06:00 - 09:00	Full CAT mock (every other Sunday) + analysis	CAT
Sun 13:30 - 15:00	Repo commit + README + screenshot	Repos
Sun 15:00 - 16:00	Paper writing: figures, table edits	Edge Sentinel
Sun 16:00 - 17:00	Japanese Genki	JLPT
Sun 19:00 - 20:00	GK / current affairs	DSSSB + IBPS

6-month calendar (Jun 2026 - Dec 2026)

Month	Theme	Weekly beats
Jun 2026	Build & calibrate	• Week 1: Read defense PDF; fix firmware/Python threshold sync (DONE). • Week 2: Bench assembly + Step 5 (Serial Monitor confirmation). • Week 3: Capture 1 hr normal operation (Step 6); fix bugs as they appear. • Week 4: Capture 5 fault scenarios (Steps 7-12) - 3-4 hr total on bench. • Exam prep: CAT basics (arithmetic, percentage); DSSSB syllabus scan.
Jul 2026	Retrain on real data + paper draft v1	• Week 1: Send captures to me; I retrain 5 models + regenerate report. • Week 2: Read regenerated report; identify gaps; recalibrate thresholds. • Week 3: Embed figures in paper.tex; fix bibliography DOIs. • Week 4: Submit paper to a colleague / supervisor for first feedback. • Exam prep: CAT 80%ile in first full mocks; DSSSB first attempt cycle.
Aug 2026	Submission + scholarship apps	• Week 1: Finalise paper draft (paper.tex clean compile). • Week 2: Submit arXiv preprint (citeable, free, fast). • Week 3: Submit IEEE Access (formal portal). • Week 4: Draft DAAD research proposal + request LoR from 2 profs. • Exam prep: CAT 90%ile in mocks; IBPS PO first mocks.
Sep 2026	MS outreach + project hardening	• Week 1: Send 15-20 prof-outreach emails (Tokyo Tech, Tohoku, TUM, TUB, KIT, EPFL). • Week 2: Prof replies start; refine SoP from the strongest responses. • Week 3: Drive-to-paper revisions (ECE measurement, cross-domain protocol). • Week 4: Start STM32 port feasibility study (do NOT commit to building yet). • Exam prep: CAT 95%ile in mocks; IBPS PO prelims.

Oct 2026	Decision season	• Week 1-2: DAAD + MEXT interview prep; IBPS PO mains. • Week 3-4: Receive first acceptances / rejections; pivot accordingly. • Edge Sentinel: pause new features. Refresh README + portfolio with real-data numbers. • Exam prep: CAT final mocks (3 full mocks this month).
Nov 2026	Exam peak	• CAT exam (Nov 22, 2026 expected) - 2 weeks of pure revision before. • IBPS PO Mains. • Edge Sentinel: weekly commit only; no new builds. • DSSSB ASO attempt (if cycle falls here).
Dec 2026	Lock + ship	• Week 1: JLPT N4 exam. • Week 2: CAT results; pivot to backup plans or MS applications. • Week 3-4: Portfolio final polish; demo video; supervisor LoR. • Edge Sentinel: end-of-year push; v2 plan for 2027.

GitHub daily-commit cadence (light, realistic, sustainable)

1 commit/day is enough to keep the contribution graph green. Edge Sentinel gets the heavy work; sibling repos get a 1-line touch each week on a rotating basis.

Day-of-week	Repo	Commit theme
Mon	Edge Sentinel	1 substantive commit (code, test, doc)
Tue	SmartGrid Digital Twin	1 light commit (typo, README, doc fix)
Wed	Edge Sentinel	1 substantive commit
Thu	Predictive Maintenance Lab	1 light commit
Fri	Edge Sentinel	1 substantive commit
Sat	(rotating) Edge Sentinel / sibling	1 commit + bench work
Sun	Edge Sentinel	1 paper / docs commit + end-of-day commit

Daily commit snippet (run at the end of every day):

```
$ cd "/Users/mohaneeshsinghmanral/Documents/Edge Sentinel Research Edition"
$ git status
$ git add .
$ git commit -m "docs: day-$(date +%j) progress note"
$ git push
```

Exam timeline + what's at stake

Exam	Date	Effort	What unlocks
DSSSB ASO	~Aug-Oct 2026	30 min/day (overlaps CAT)	Delhi govt admin job, ■45-65k salary, home posting
IBPS PO	Prelims Oct 2026, Mains Nov-Dec 2026	30 min/day (overlaps CAT)	Bank PO job, ■40-55k salary, all-India posting
CAT 2026	Nov 22, 2026 (expected)	2 hr/day weekdays + 1 mod weekend	IIM/K/V/MDI/IIFT - ■22-30 LPA
JLPT N4	Dec 2026 (target)	30 min/day SRS + 1 hr/week	Waseda Scholarship eligibility; Japan MS pathway
SSC JE	2027 cycle (postponed)	0 hr in 2026; revisit 2027	Govt engineering role; needs EE revision first

If you hit 99.5+ on CAT, you're competitive for IIM-I/T/R/K/V/MDI/IIFT. Realistic pack: 2 IIM converts + 1 MDI/IIFT/FMS shortlist + 1-2 SSC/banking backups. 55/55/68 closes some doors but opens others — your project + paper + BEL story compensate.

What's left after the steps (the to-do at Dec 31, 2026)

- Hardware calibration (compare INA219 against bench multimeter, add calibration constant).
- Multi-panel test rig (repeat protocol with 2-3 panels to validate cross-panel generalisation).
- Long-duration drift test (7-14 day capture; required for operational credibility).
- Outdoor enclosure (IP65 box, panel-mount DHT22 in radiation shield).
- Quantised TinyML upgrade (replace centroid with TFLite-Micro int8 model; ~2-3 weeks work).
- Web API for external monitoring (FastAPI exposing live readings; ~1 week).
- Research paper revision (post-IEEE review response, ~3 months after submission).
- LoRa / GSM backhaul for off-WiFi installations (~4 weeks hardware + firmware).
- Battery-state monitoring if storage is added (extra INA229 + state-of-charge model).

Drop-order (if a week goes sideways)

Priority	Drop first	Recover by
1 (drop first)	GK / current affairs	Compress to 30 min
2	Japanese Genki reading	SRS Anki only, 10 min
3	Edge Sentinel deep work	Cut from 4 hr to 2 hr
4 (drop last)	Sibling repo build	Move to following Saturday
NEVER DROP	CAT problem set / Anki / GitHub commit	These three are non-negotiable

Companion documents: docs/Edge_Sentinel_Bench_Checklist.pdf (15-step hardware plan), docs/hardware_assembly_guide.pdf (12-page bench reference), docs/project_defense.pdf (28-page interview prep), docs/daily_planner.pdf (Power-BI-style daily routine), docs/paper/paper.tex (IEEE Access draft), this PDF (6-month timetable).
